

Hey, I'm Clem 🙋

I'm a passionate software engineer, producing efficient applications using best practices and technologies which empower teams. I strive for maintainable products, efficient codebases, simplicity and well organised teams where standards, tools, and processes facilitate the development to deployment journey.

Naturally curious and mission driven, I work to maintain a broad range of skills, while keeping open source close to my heart. Ultimately, I enjoy producing beautiful, clean, solid and meaningful products as a team.

Skills & Technologies

Core

- Laravel (PHP)
- React / Vue (TypeScript)

Extended

AWS , Bash , Chef , CI/CD Pipelines , deployphp/deployer , Detox , Docker , Elasticsearch , Express , GitHub Actions , Grunt / Gulp / Webpack , Inertia , Jest , Lambda , MySQL , Node.js , PHPUnit , Progressive Web Apps , PubSub , Push Notifications , Queues , React Native , RESTful APIs , Serverless , Terraform , TypeScript , Gatsby ...

Other skills

Architecture and prototyping , Code Review , DevOps , Group and workshop facilitation , Linux server administration , Open Source contributor , Package development , Pair and mob programming , Peer leadership , TDD , Documentation ...

Experience

» Technical Lead - Full Stack at [Pod Point](#)

January 2020 - present

- Contribute on recruitment with improved technical tests and processes while growing from 20 to 100+ staff within the technology department
- Leading and mentoring a B2B squad, setting high standards in an open and effective environment
- Facilitate the production of technical specifications and prototypes in a collaborative manner whilst remaining an individual contributor with backend and frontend development, focusing on both short and long term goals
- Upgrade and modernise Laravel applications using Inertia and React alongside GitHub Actions pipelines
- Responsible to organise R&D as well as maintaining various private and public open source packages
- Keep developing various commercial products powered by Laravel, Serverless and Gatsby involving various third party integrations
- Commit to various modernisations and improvements within our estate and collaborate with product owners to meet both business and quality objectives

- Work hand in hand with customer support in order to improve monitoring, alerting and tooling to help troubleshooting issues and improve both our support and our systems
- Own and maintain AWS accounts and resources provisioned via infrastructure as code for our domain within a distributed architecture

» **Senior Software Engineer - Full Stack at [Pod Point](#)**

April 2019 - January 2020

- Joined a small team to help prototyping, developing and deploying in an agile environment on various internal and external RESTful APIs, microservices and web/mobile applications for a range of stakeholders using Laravel and React(Native)
- Implement AWS solutions and maintain DevOps practices such as EC2 provisioning and deployment with Chef/OpsWorks - Elasticsearch, RDS and Cloudfront management - Cloudwatch
- Contribute to maintain a very high-volume IoT data pipeline via Lambda (w/ Serverless framework), Kinesis Streams and SNS/SQS consumed by Laravel applications

» **Software Engineer - Full Stack at [fuseAware](#)**

November 2018 - April 2019

- Responsible for the scoping, refactoring and ongoing development of the fuseAware back-end application using Laravel, Vue and TDD, in an Agile environment
- Streamlining the software and infrastructure architecture in order to improve scalability and maintainability of the back-end application
- Ensuring the back-end application meets the KPIs defined for performance and uptime, and that the code deployed is tested, reliable and fit for purpose

» **Technical Lead at [Cyber-Duck](#)**

March 2017 - October 2018

- Working at every technical level of a project, from supervision to implementation, working closely with the project manager, our DevOps team, and the developers
- Responsible for overseeing the expertise of the tech department by establishing standards, and streamlining processes and toolchains
- Developing applications in object oriented PHP frameworks like Laravel using TDD and SOLID principles
- Developing and deploying mobile applications for clients using technologies like Appcelerator Titanium, Node.js and Web APIs

» **Senior Web & Mobile Developer at [Cyber-Duck](#)**

March 2014 - March 2017

- Progressing from junior to senior, taking responsibility for retainer projects and project management
- Developing applications in object oriented PHP frameworks like CodeIgniter, Laravel, and Silverstripe
- Working with other technologies like Appcelerator Titanium and Node.js, especially for R&D projects like UX Companion, a glossary of user experience terminology downloaded more than 50,000 times
